Retail Customer Behavior Overview

OVERVIEW

Shows customer purchase behavior, revenue drivers, product mix, and satisfaction across demographics, seasons, and channels. It highlights which categories and items generate the most revenue, how discounts and subscriptions relate to spend and ratings, and which locations and shipping options lead performance. It also surfaces size and color preferences and identifies high- and low-performing segments for action.

Overall Insights

- The top three items (Blouse, Shirt, Dress) dominate revenue in a tight cluster around $10.3K–$10.41K, with no single clear winner among them.
- Revenue declines modestly across the top 10 items, dropping about 3–6% to mid-ranked SKUs and about 7–10% to the bottom of the top-10, indicating limited differentiation among top products.
- Purchases at 14-day and 90-day frequencies drive the highest revenue (~$65K–$69K), while 7-day and 30-day cadences contribute roughly half that, highlighting biweekly and quarterly purchase cycles as the strongest performers.
- The lowest revenue occurs for 7-day and 30-day frequencies, implying very frequent or monthly buyers contribute less total spend than those on 14- and 90-day cycles.
- Size M is the dominant share of volume at 45%, followed by L at 27%; together M+L account for about 72% of total volume while S and XL are much smaller (17% and 11% respectively).
- Inventory and assortment should prioritize sizes M and L; S and XL are lower priority for replenishment or promotions.
- Across categories, non-discounted revenue exceeds discounted revenue in Clothing, Accessories, Footwear, and Outerwear (e.g., Clothing: ~$60.6K no discount vs ~-$43.7K discounted), indicating discounts reduce overall revenue in all categories.
- The largest absolute discount impact is in Clothing and Accessories, suggesting discounts are more prevalent or influential there and protecting full-price sales in these categories would materially boost revenue.
- The “Other” location is a major outlier, contributing ~$168.9K in revenue (over 30x any named state); average ratings across locations are similar (roughly 3.5–3.8).
- Named locations show similar modest revenue (~$5–$6K each) but more variation in ratings (highest ~3.83, lowest ~3.49), indicating revenue is driven by the aggregated “Other” category rather than geographic spread; investigate what “Other” encompasses.

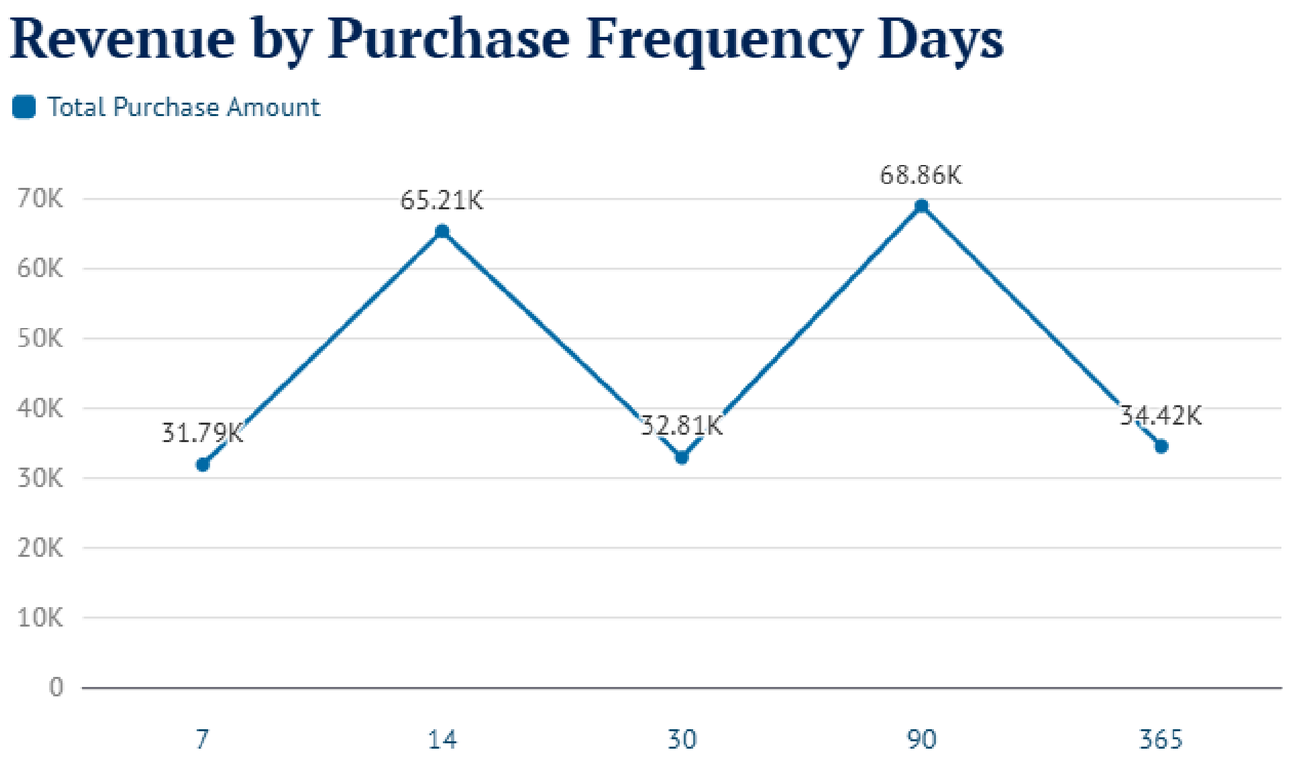
Key Insights

- Blouse, Shirt and Dress are the top three revenue drivers and are tightly clustered (~$10.3K–$10.41K), indicating no single clear winner among the top products.

- Revenue drops by roughly 3–6% from the top cluster to the mid-ranked items (Pants, Jewelry) and by ~7–10% to the bottom of the top-10, suggesting modest differentiation across the top SKUs rather than a long tail.

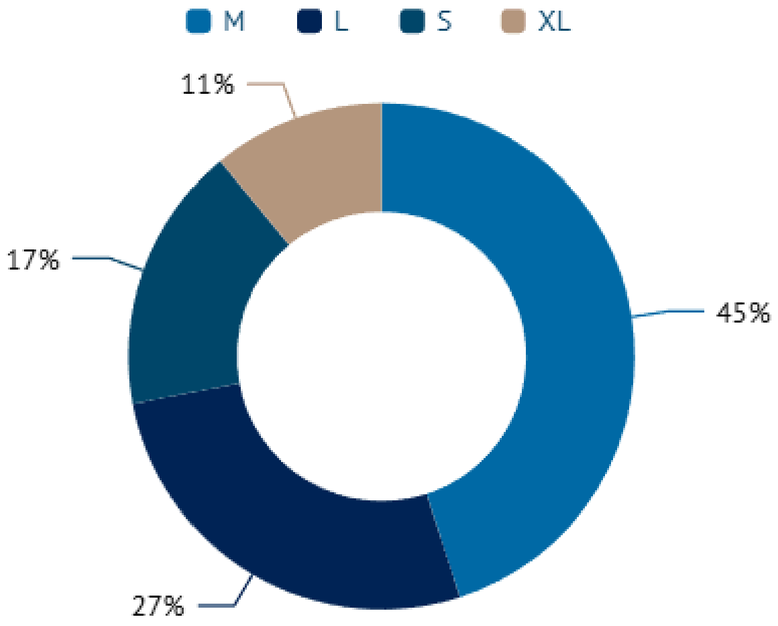


Key Insights

- Revenue spikes at 14 days (~65K) and 90 days (~68.9K), while short (7 days) and monthly (30 days) frequencies generate roughly half that revenue (~31–33K), indicating strong performance at biweekly and quarterly purchase cadences.

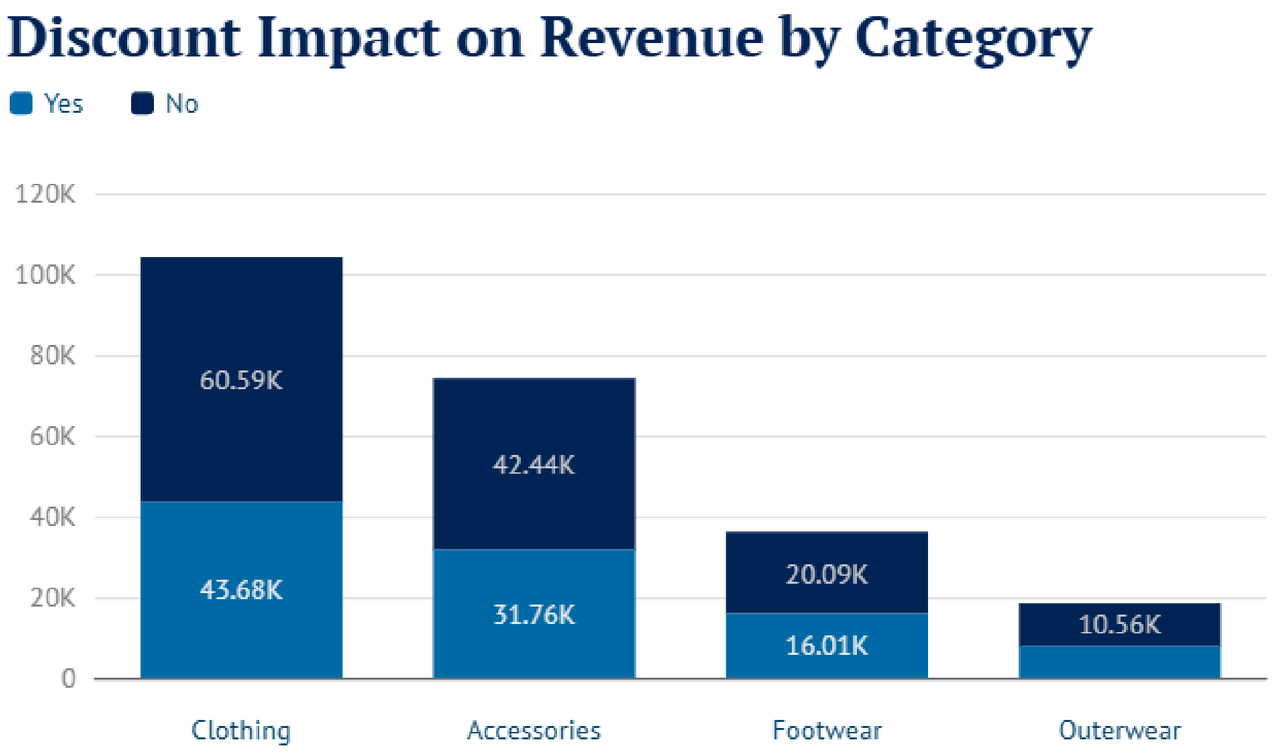
- The lowest revenues occur at 7 and 30 days, suggesting very frequent and monthly purchasers contribute less total spend than customers on the 14- and 90-day cycles.

Size Mix Share



Key Insights

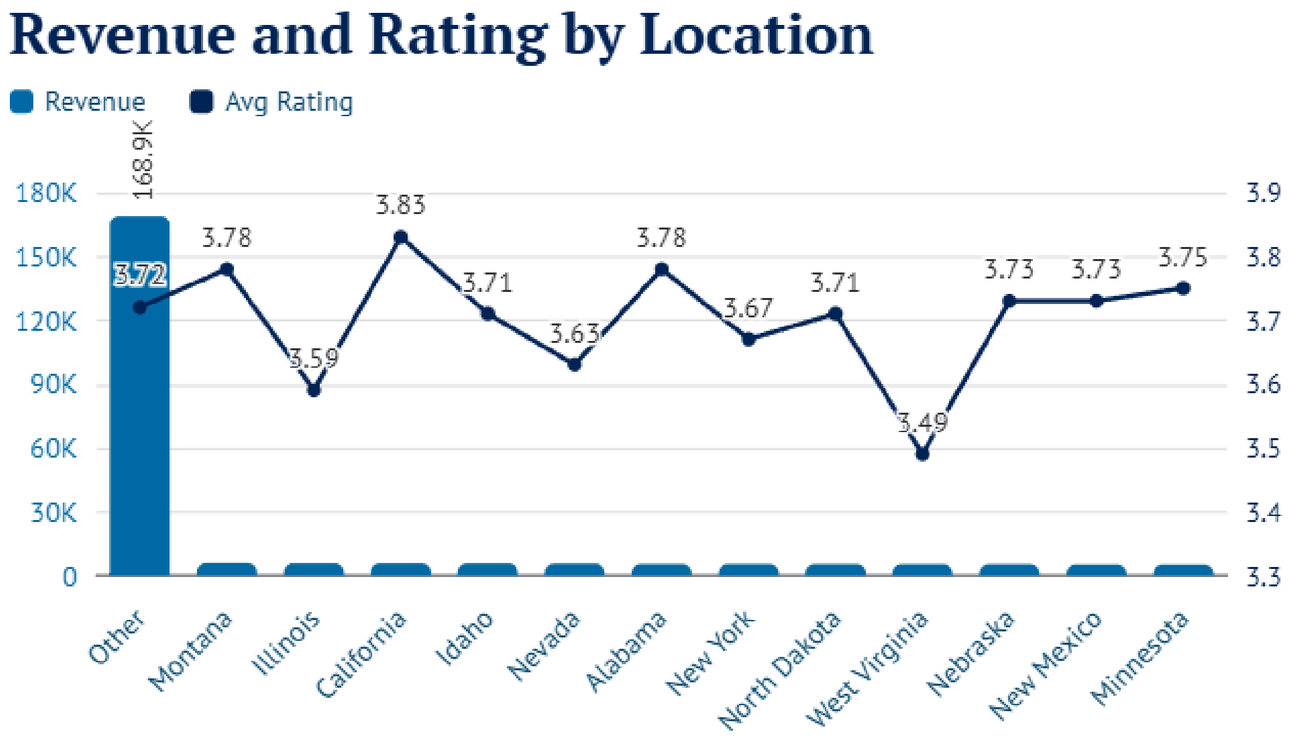
- Size M dominates the mix at 45%, followed by L at 27%; together they account for ~72% of volume, while S and XL are much smaller (17% and 11%).
- The product assortment and inventory should prioritize M and L given their outsized share, with S and XL as lower priority for replenishment or promotional focus.



Key Insights

- For every category (Clothing, Accessories, Footwear, Outerwear) non-discounted revenue ("No") exceeds discounted revenue ("Yes"), e.g., Clothing non-discounted ~60.6K vs discounted ~43.7K.

- The largest absolute impact is in Clothing and Accessories, suggesting discounts are more prevalent or more impactful in these categories and that protecting full-price sales there would materially improve revenue.

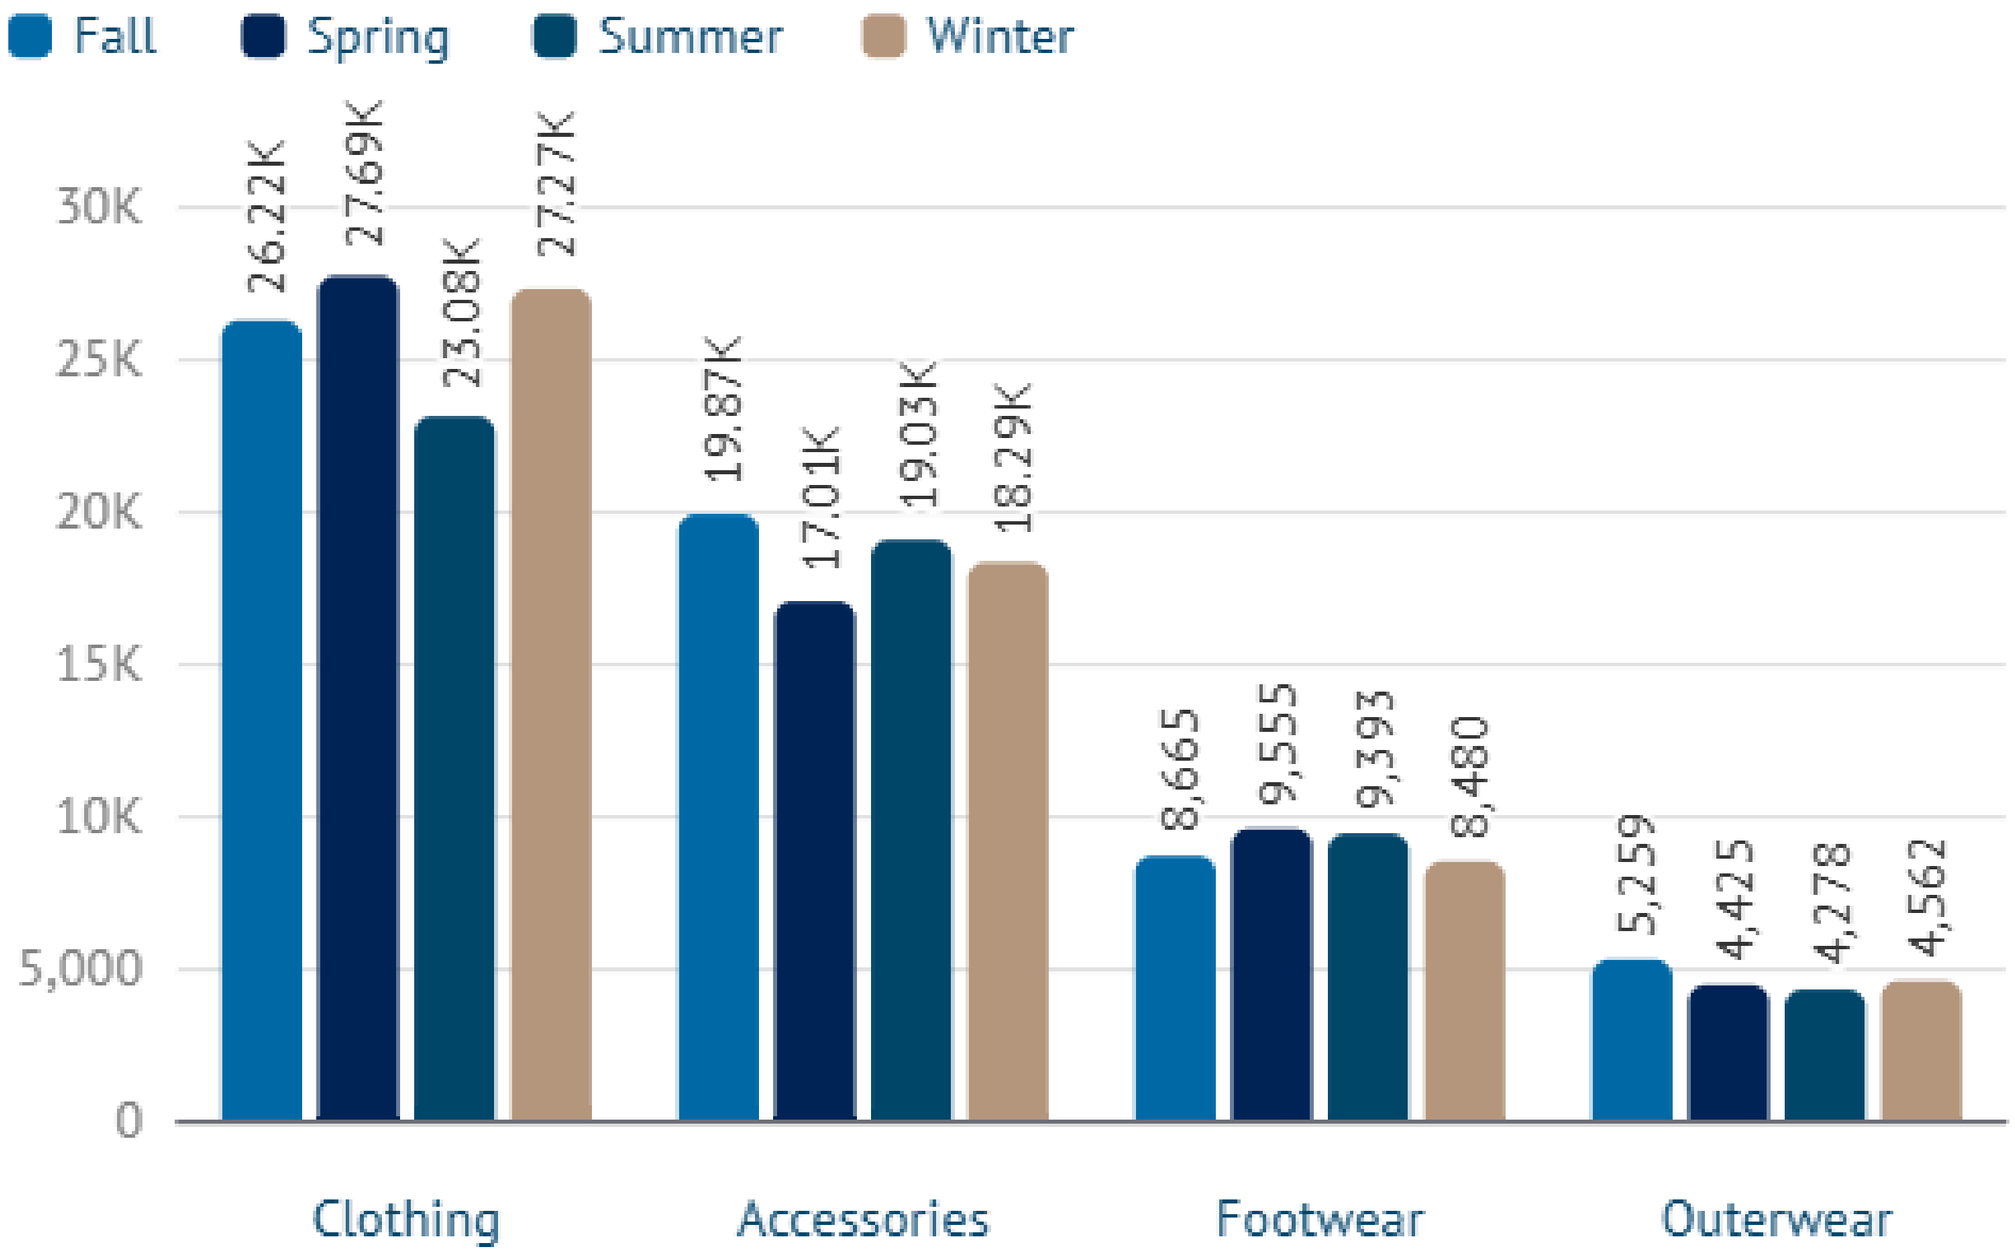


Key Insights

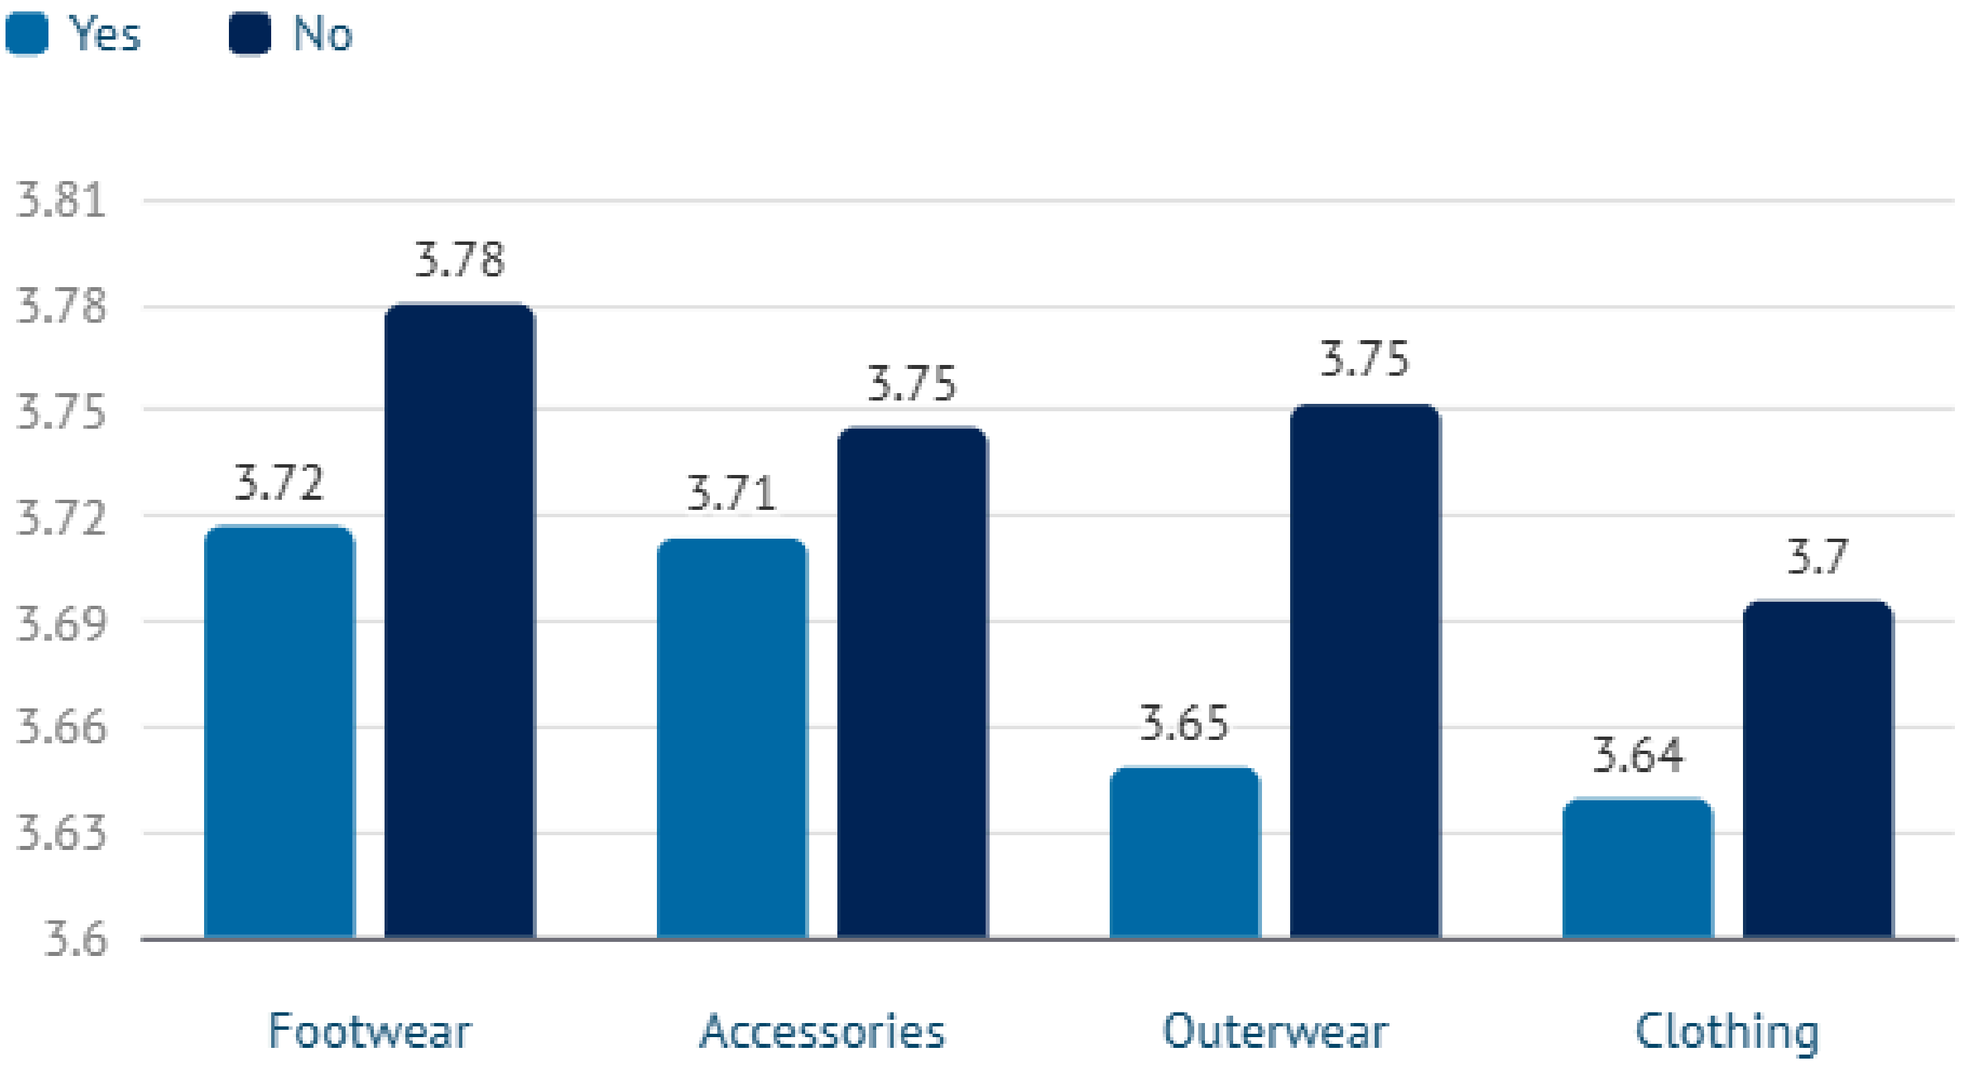
- The "Other" location is a major outlier, contributing ~168.9K in revenue—over 30x any named state—while average ratings across locations remain clustered around ~3.5–3.8.

- All named locations have similar low revenues (~5–6K) but varying ratings (highest ~3.83, lowest ~3.49), indicating that location-level revenue is dominated by a single aggregated category rather than geographic spreads; investigate what "Other" includes.

Revenue by Category and Season



Average Rating by Category and Subscription Status



Payment Methods Performance Summary

Payment Method	Total Revenue	Orders	Average Rating
Credit Card	$40,310.00	671	3.74
